Offices: US, Europe, Asia

Awards in 2009: InfoSecurity Products Guide Global Product Excellence Awards, SC Magazine Awards UK, InformationWeek Startup 50

Open platform support: Check Point, Juniper, Cisco, Fortinet, Blue Coat, F5, Linux IPTables and more

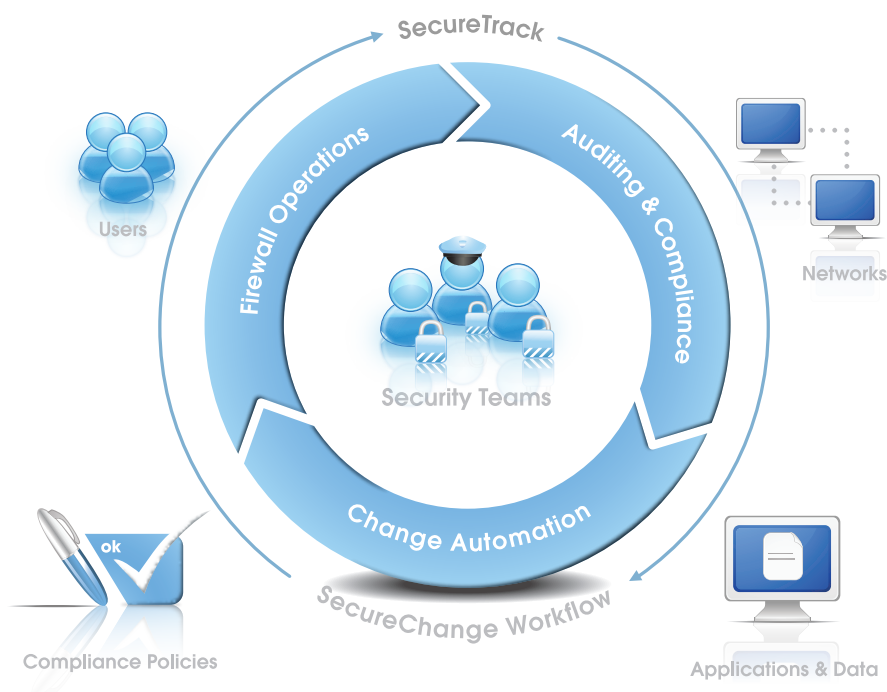

The Security Lifecycle: An Operational Challenge

Providing network security for today's enterprise is a continuous process of implementing corporate policy, fielding daily change requests, and demonstrating compliance with standards. For most organizations, this has become a complex, resource-intensive operation involving dozens of components, often located at distributed sites and maintained by multiple teams. At the same time, regulatory agencies are demanding increasingly rigorous standards of transparency and accountability.

To successfully align day-to-day operations with security objectives, companies need complete visibility

into security policy across the organization - as well as the necessary tools to automate and manage the security lifecycle efficiently.

Tufin offers a comprehensive solution for security officers that enables them to implement, manage and audit security policy faster, more easily, and more accurately than ever before. From the very first security audit, Tufin dramatically reduces the cost of firewall operations. Most customers report a return on their initial investment within 6 months of purchase.

World Class Solutions

Companies around the world are using Tufin's award-winning SecureTrack™ and SecureChange™ Workflow products to increase the accuracy and efficiency of security operations.

SecureTrack - Firewall Operations Management

Tufin SecureTrack is the industry-leading Security Operations Management solution for firewalls and network infrastructure including routers, switches, load balancers and web proxies. SecureTrack provides comprehensive change tracking, in-depth security policy optimization, and built-in compliance reports that slash audit preparation times. With SecureTrack, companies can increase network security while dramatically reducing manual, repetitive tasks.

SecureChange Workflow - Security Change Automation

Tufin's pioneering SecureChange Workflow solution enables companies to automate security change management and

risk analysis for firewalls and related network infrastructure.

With SecureChange Workflow, companies can automate business processes to proactively enforce security policies. Designed to handle every aspect of security policy changes, SecureChange Workflow supports governance initiatives and takes corporate and regulatory compliance to the next level.

TOP - Tufin Open Platform

Through the Tufin Open Platform, Tufin products support a growing list of firewalls and network infrastructure. With the TOP SDK, it is simple for customers and partners to create plug-ins. Visit www.tufin.com for the list of supported devices and vendors.
